

Golden Bell Requirement

- **Cotrol Panal**

its published at

<https://golden-auctions.com/login>

in production mode

the same control panel published at

<https://goldnbell.co/login>

for development and we can work there

- **IOS Deleted Files**

What do you mean by deleted, IOS App is already in the last commit of the repo already provided

- **Backend Code**

last commit to the repo made 4 days ago and it has the last code version

- **Postman API**

we don't have a Postman collection so we have to extract it manually from the code and route files

- **Payment Gateways**

we will provide "URWAY" for Payment, but we will not activate it now, although it should be implemented and ready to use

- **Nafath API**

it will be provided as soon as we finished the other stuff as it requires a lot of paper work
